

Rubik Cube – Asset Store Documentation

Quick Look

- ✓ **Unity 2021.3 or newer** (Built-in, URP, HDRP)
- ✓ Works seamlessly on **Android, iOS, Windows, macOS, WebGL**
- ✓ Includes **full source code**, customizable cube logic, and documentation
- ✓ Fully **modular, extendable, and lightweight** design
- ✓ **No third-party dependencies** – all original assets

Description

Rubik Cube is a complete, interactive 3D puzzle system built in Unity.

Players can rotate and solve cubes of different sizes (2×2 to 9×9) using smooth and intuitive controls.

Designed for both learning and gameplay, this package provides a clean framework for puzzle-based projects, visual experiments, or interactive showcases.

Developers can easily modify cube materials, colors, rotation speeds, and input systems — making it perfect for mobile, desktop, or web-based puzzle games.

Features

-  **Multiple Cube Variations** – Choose between 2×2 to 9×9 cube types
-  **Smooth Rotation Controls** – Rotate along **X, Y, and Z axes** with ease
-  **Intuitive Input System** – Control using **mouse drag, scroll, or hotkeys**
-  **Camera Orbit & Gizmo** – Built-in **camera rotation and orientation widget**
-  **Customizable Materials** – Change **colors, cube sizes, and materials** effortlessly
-  **Prefab-Ready Setup** – Quick and easy integration into your own projects
-  **Lightweight & Optimized** – Suitable for **mobile and desktop** platforms
-  **Clean Source Code** – Modular scripts with **clear documentation and comments**
-  **Ready-to-Play Scene** – Single playable scene: `RubikCubeScene.unity`
-  **No Third-Party Plugins** – 100% self-contained, Unity-native implementation

3 URP Compatibility

Rubik Cube works perfectly with **Built-in**, **URP**, and **HDRP** rendering pipelines.
No special setup required — simply open and play across all supported Unity pipelines.

4 Gameplay System

-  **Cube Manipulation** – Rotate cube layers using mouse or hotkeys
-  **Puzzle Logic** – Realistic Rubik's Cube behavior with accurate rotations
-  **Customization** – Adjust cube size, color, and animation smoothness
-  **Camera Control** – Orbit around the cube for precise viewing angles
-  **Editor Tools** – Prefabs and sample scripts for custom extensions
-  **Goal** – Players can reset, scramble, and solve the cube dynamically

5 Documentation

 Full documentation is included in:
[Assets/RubikCube/Documentation/](#)

Covers:

- Setup & Scene Overview
- Cube Customization Guide
- Input & Camera Control Setup
- Material and Color Editing
- Extending the System for Custom Logic

6 Technical Details

 **Unity Version:** 2021.3 or newer

 **Supported Platforms:** Android, iOS, WebGL, Windows, macOS

 **Dependencies:** None (fully self-contained)

 **File Structure:** Clean, organized, and easy to extend

Release Notes

 **Version 1.0.0 – Released October 2025**

- Initial release with cube variations (2×2 to 9×9)
- Fully integrated input and rotation systems
- Optimized for mobile and desktop performance
- Included complete prefab and camera setup
- URP, HDRP, and Built-in pipeline compatible
